UNIVERSITY

# My Internet

(LTU ID #2000-12)

## Description

Using this patented technology, you control the Internet. You can treat Web pages and files on the Internet just like files on your own disk directory. You can browse, organize, search, and even edit Internet files the same way you do on your files.

To begin a new user is given an initial Internet directory that contains folders and subfolders of categorized Web pages and files found on the Internet. You can use the Internet directory the same way you use your own disk directory. For example, you can move files from a folder to another, in doing so you reclassify Web pages or Internet files. Whatever changes you make to the Internet directory are automatically saved for you.

In this way you have control over the Internet. The changes you and others make to the directories are gathered and analyzed to produce the next generation of Internet directory that is given to the first-time users. The next generation of Internet directory also contains new Web pages found on the Internet, and is also used to update your Internet directory. You are a member of the Internet community and you help reshape your Internet.

## Advantages

- Provides a new way for people to use the Internet
- Gives people more control of their search engine and the Internet
- Provides a new way to organize Web pages found on the Internet
- Provide a new way to capture the preferences of the Internet communities

## Areas of Application

- Information Technology
- Search Engine
- Web Page Classification

## Patent Status

US Patent 7,134,082 issued November 7, 2006
